

Efficiency – maximising the use of District Heating and Cooling with better legislation

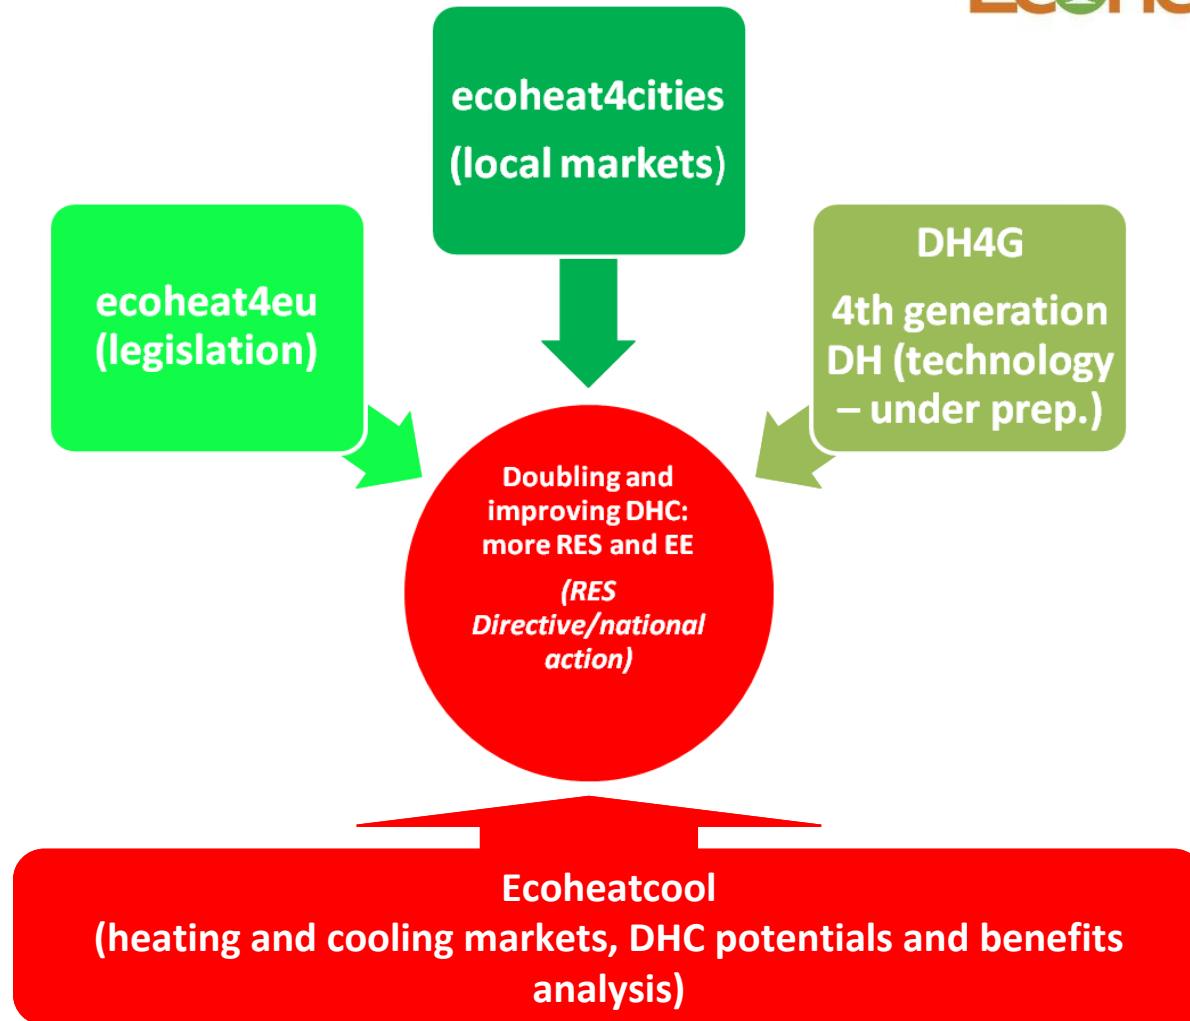

Welcome

April 12, 2011

Green Heat

The project rationale

- Most sectors, and in particular the energy sector, are driven by EU legislation
- District Heating and Cooling: an interface between many sectors, with many local facets and huge differences
 - in market shares: from almost zero to 70%
 - in the use of renewables, surplus heat and fossil fuels
 - in acceptance

The workshop

- Which are the results of EU legislation in place?
- What works and what does not work in national laws?
- How can we transfer best practice?
- How can national governments and the EU foster growth in a diverse market?
