

Hm. I think I have read this before...

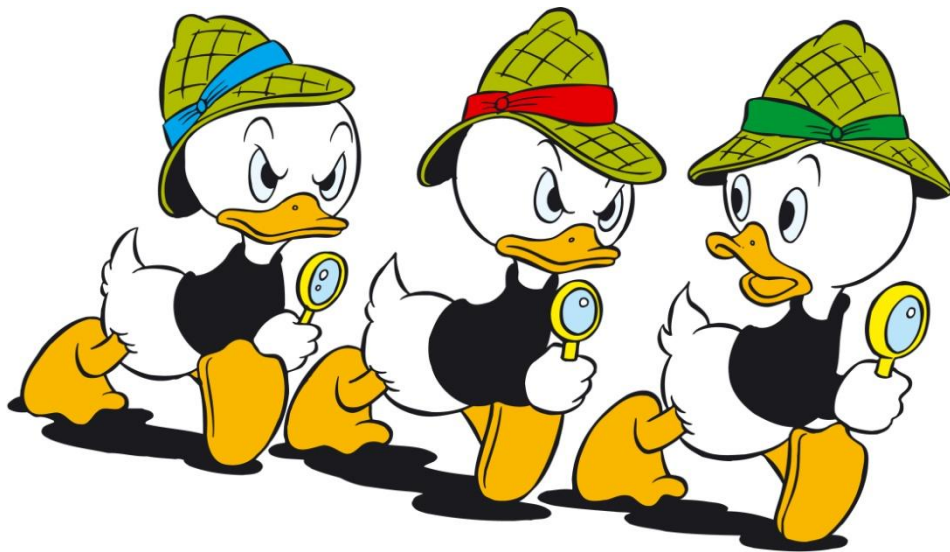

District Heating is stupid, expensive and not environmentally friendly.

District Heating and Cooling is...

*Simply magic.
You feel it. But you don't
smell it. You don't hear it.
And you don't even see
it...*

But you do not really believe in magic, do you?

So how do we document...

The urban energy
challenge?

Efficiency across the whole
supply chain?

Prices?

District heating and
cooling developments?

Environmental
performance?

To grow DHC

Ecoheat4eu

The Ecoheat4EU project was devised with the aim of supporting the creation of well-balanced and effective legislative mechanisms to foster the development of modern district heating and cooling throughout Europe, and more specifically, in the fourteen countries targeted by the project. www.ecoheat4.eu
